

Medical Equipment Road Freight

CASE STUDY

When a specialised medical company reached out to WTA seeking to send vital equipment to various European destinations, our road freight experts rose to the challenge.

About the Client

A leading medical equipment company who provides medical equipment all over Europe for clinical trials.

The Challenge

WTA has regularly handled the shipments of ultra-low temperature freezers to various European delivery locations. Sometimes there are multiple delivery countries on one vehicle; this was the case for the medical equipment company. As well, some of the deliveries were including complex destinations like Ukraine, very close to Crimea. Each shipment needed to be shipped express, with white-glove service.

How we helped

WTA's team of experts coordinated shipments from sending to arrival. Each delivery was required to be on a tail-lift vehicle. Goods were then collected, loaded, and transported to the destination country and specific medical clinic. Once the delivery arrived at the clinic, WTA arranged the movement of the goods into the building. WTA unpacked the freezers and took all the packaging away, ensuring delivery was effortless.

Once the clinical trial was completed, WTA returned to the location to repack the goods and managed the return of equipment back to the origin base.

How did we do it

Expert teams and trusted 3rd-party suppliers enable us to provide this bespoke solution allowing the customer to meet demands readily. WTA took away the stress of the entire delivery process, allowing the clinical trials to start without delay.

How does this help you?

At WTA, you can enjoy a bespoke service like no other. 100% tailor-made to your specific business needs, our experts apply their extensive knowledge to get your goods to their final destination on time, securely and per your budget. Regardless of your size, WTA has the right team to ensure success in your shipments.
