# WTA Group in Numbers

**110+**

**Years moving freight  
across the world**

We've been in the international freight industry for a very long time.

**679**

**Trade lanes operated  
across**

We have experts across all the world's major trade lanes... and plenty more besides!

**6000+**

**Customers across 122  
countries**

We're proud of our huge network of happy customers. Many of which have been with us many years.

WTA Energy

# Energising your logistics, powering your success

At WTA Energy, we specialise in providing world-class logistics and freight solutions for the oil and gas, renewable and energy industry. With decades of expertise, we ensure seamless transportation of critical materials across the globe, from energy sector components to specialised chemical shipments.

Our commitment to innovation, compliance, and sustainability drives us to deliver efficiency and reliability. From air and ocean freight to heavy-lift logistics, we offer comprehensive services designed to meet the challenges of global supply chains.

With a global presence spanning the UK, Middle East, Asia, and beyond, WTA Energy Ltd is your trusted partner for powering logistics worldwide.

## Global Freight Solutions

Air, Ocean, Road, Rail & Heavy Lift

## Expertise in Oil & Gas, Renewables & Infrastructure

## Compliance & sustainability-focused logistics

## Industries We Support

Energy, Marine, Aviation, Mining & Defence

# Comprehensive freight solutions for the **energy sector**

## Ocean freight

Cost effective, secure shipping for heavy cargo.

## Air freight

Rapid, global cargo transport for critical energy components.

## Road freight

Flexible solutions for road freight.

## Project moves, ocean and air charter

We can build solutions to fit any unique project.

## Consultancy

Decades of energy logistics experience in-house and happy to help.

## Customs and compliance

Smooth clearances and regulatory support

# Unpacking our ocean freight service

## Block space agreements and breakbulk shipping

Reliable, block space agreements on major shipping routes and good relationships with all the major container and breakbulk ocean carriers.

## Charter vessels for oversized and heavy cargo

Secure transportation for large-scale equipment, including turbines, and critical infrastructure.

## Dangerous and hazardous goods compliance

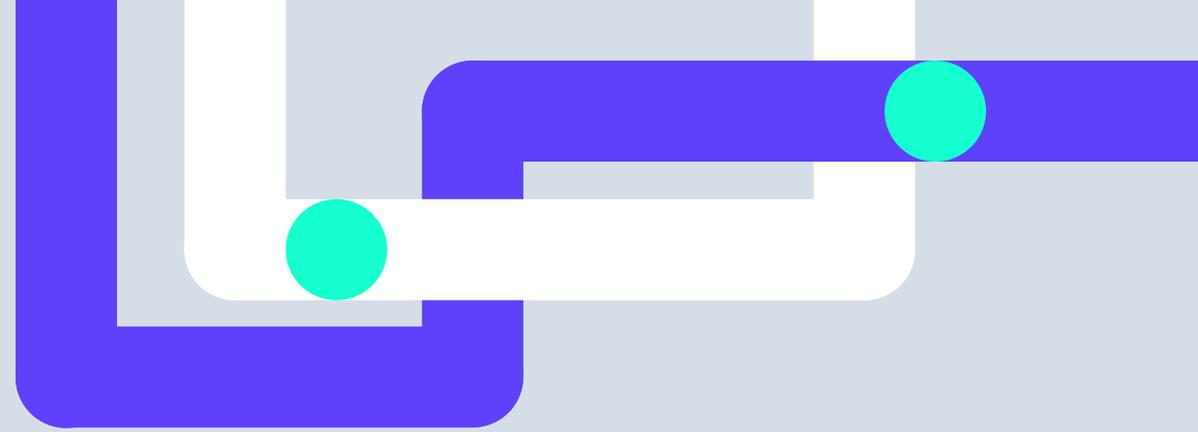

Expertise in the safe and certified handling and transportation of dangerous goods under strict global regulations.

## Flexible routing and cost-optimised solutions

Routing always optimised for minimising transport time and optimising cost. Integrated air freight with multi-modal transportation offers.

## Real-time tracking and security

Live shipment tracking with GPS location, CO2 emission tracking and a range of vital data points available within the **WTA Platform** visibility tool.

# Our tailored road freight solutions

## Space agreements and LTL options

Ship full (FTL) or part (LTL) trailers of goods, taking advantage of our block space agreements.

## Heavy and oversized cargo

Specialised low loaders and heavy-duty vehicles for turbines and other large-scale infrastructure.

## Dangerous and hazardous goods compliance

Fully ADR-accredited transport services for dangerous goods.

## Real-time GPS tracking

Advanced tracking capabilities and real-time data, courtesy of the **WTA Platform**.

## Express and time-critical deliveries

Rapid-response transport availability when time is critical.

# Air Freight

We've been in international freight long enough to know speed is critical for air freight shipments. Which is why we have built quick action into every stage of our air cargo offer.

We're able to provide the full range of air freight services to perfectly suit your requirements:

- Bonded warehousing
- Hand-carry shipments
- GPS tracking
- Dangerous goods
- Temperature controlled
- Emission tracking
- Carbon offsetting
- Geofencing
- Cargo iQ standards
- Abnormal loads

We use our relationships with all the major airlines to acquire the most competitive rates and keep unforeseen costs to an absolute minimum.

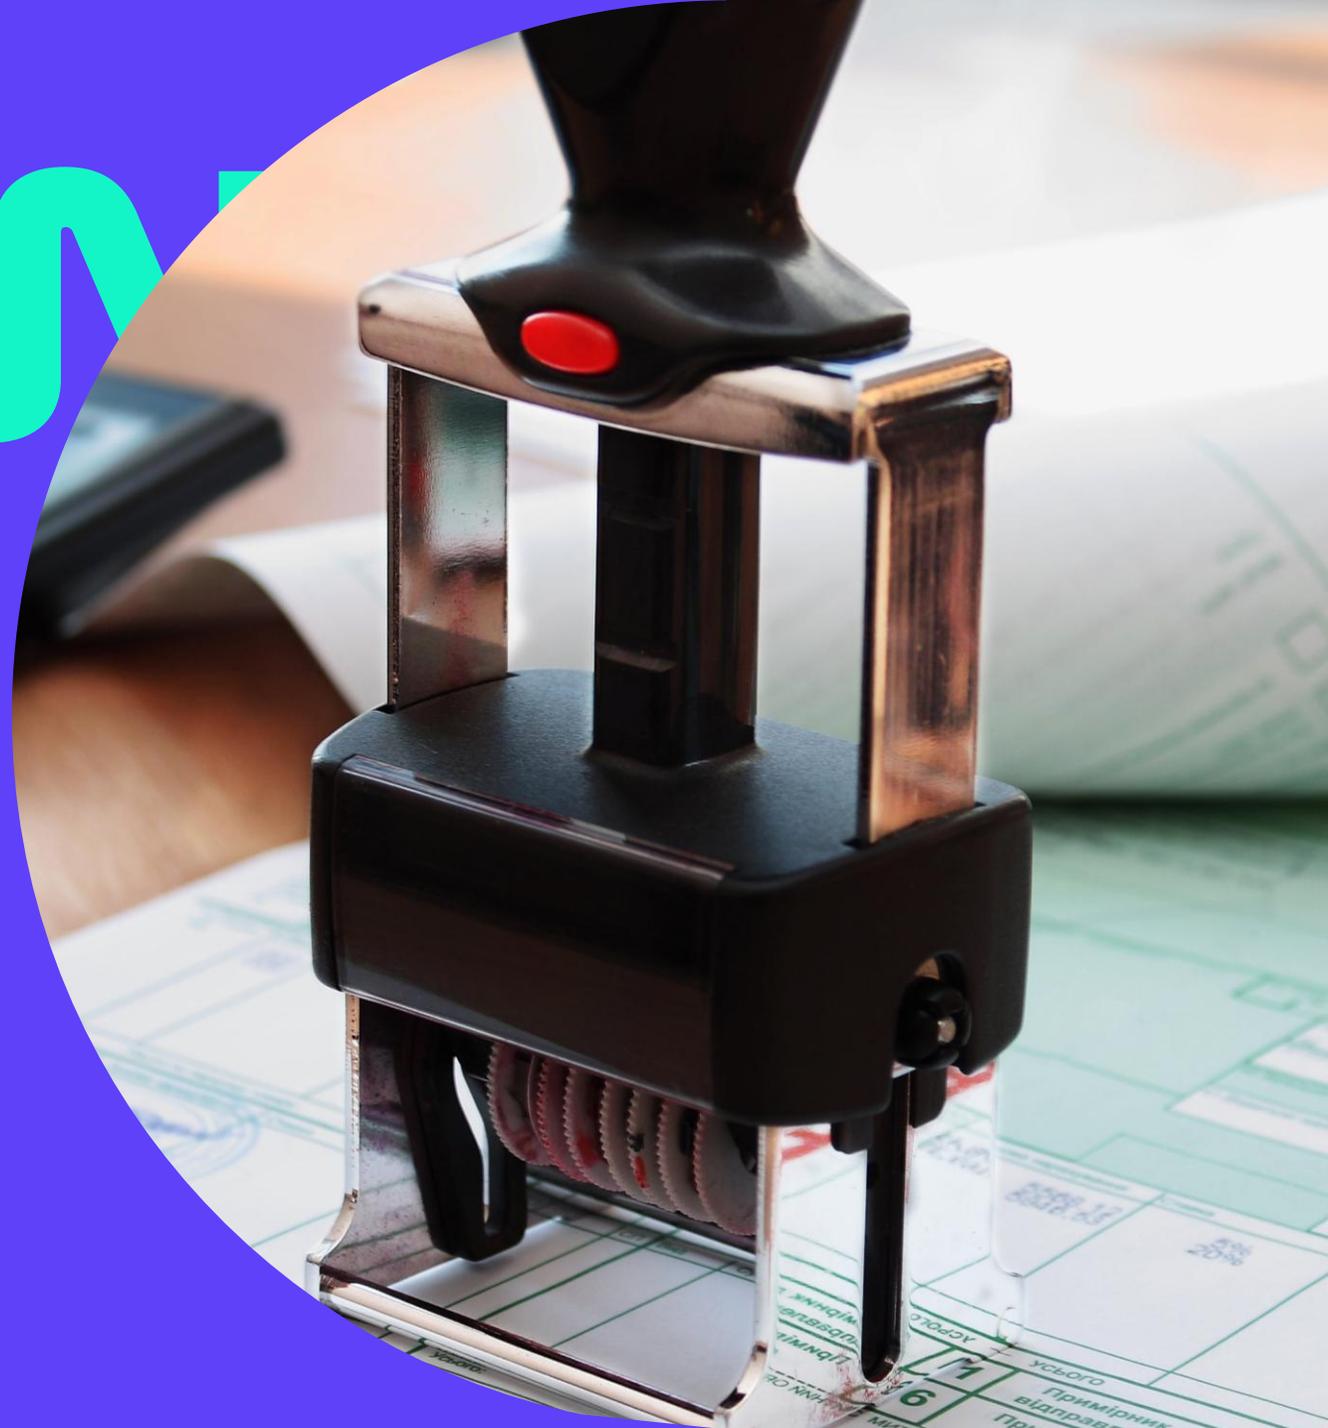

# Additional support

## Customs compliance and consultancy

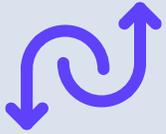

We offer different solutions for customs brokerage, ranging from simple online clearance to more complex assessment and advice from our international team of customs experts and licenced brokers.

## Logistical estimations and feasibility

We are here to help with quick pricing indications and technical surveys to determine feasibility of a transport operation.

# How can we help?

We boast a **wealth of industry knowledge** from decades of experience in logistics

We build **long partnerships with our clients**, adding value in all aspects of their supply chains

We have experience in **out of gauge and other project logistics** projects

A **global footprint** means wherever business takes you, we can help.

**Customs and compliance assistance in-house** with our team of experts

We use a **consultative approach** in all our solutions, helping you to identify and mitigate risk

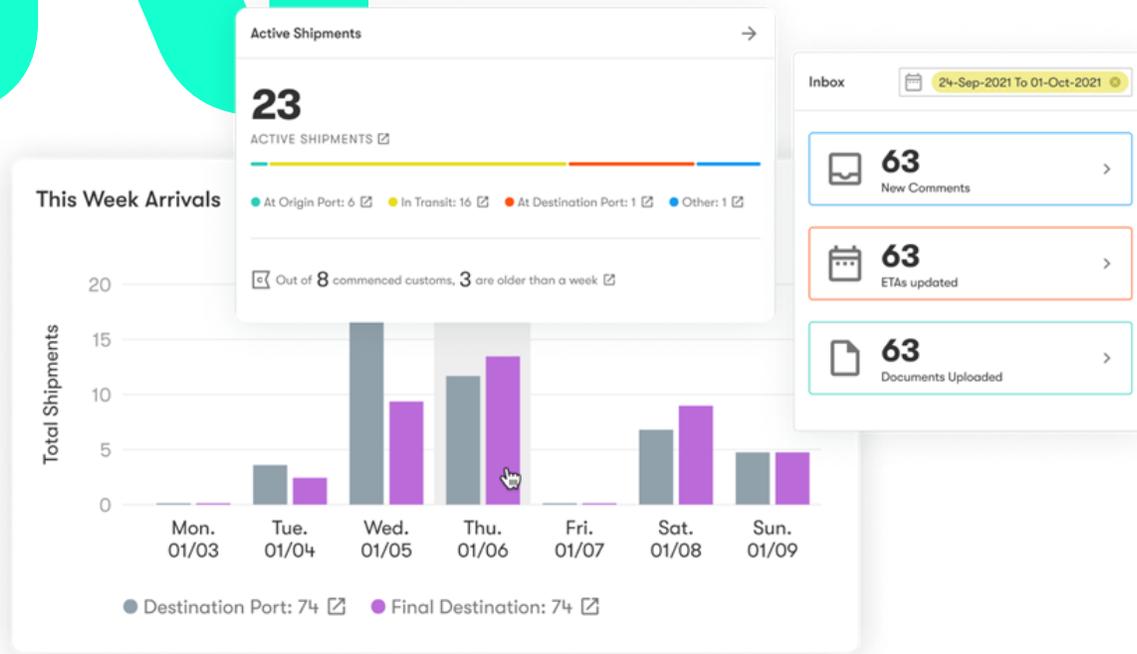

Hapag-Lloyd

# Our global presence

In the loop logistics.

# The WTA Platform

The industry-leading WTA visibility platform offers real-time tracking, invoicing and analytics, so you have complete supply chain transparency.

Our tool brings the management of your freight into a modern, user-friendly interface. Store all documents and accounting information alongside each booking, accessible to all relevant stakeholders.

Analytical reports allow you to make crucial cost and time saving decisions, without compromising lead time.

**Boost ROI across the supply chain**

**Measure emissions with our CO2 tracker**

**Anticipate delays ahead of time giving you a vital window to mitigate disruption.**

**Critically analyse the performance of every supply chain partner.**

# Case study: Time-sensitive delivery of oversized cargo

## Challenge

A UK-based subsea contractor needed urgent delivery of an oversized winch set from Singapore to their fabrication yard in Batam, Indonesia.

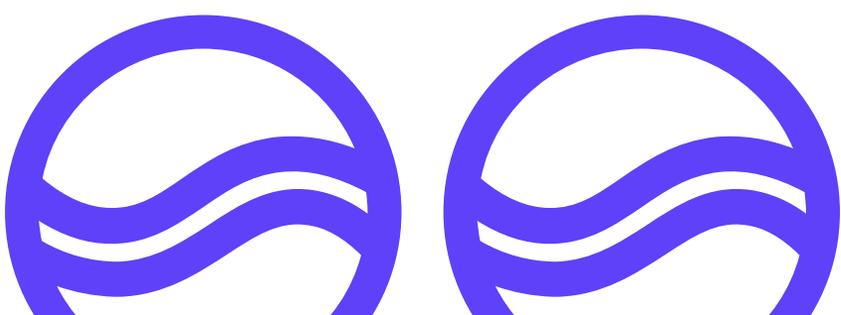

The cargo was time-critical, with just 48 hours available for full mobilisation. Special handling and international customs clearance were required due to the machinery's size and complexity. Any delay would have jeopardised a key milestone in their marine project.

## Action

- Carried out pre-shipment planning including cargo assessment, transport mode selection, and site readiness coordination in Batam.
- Managed all documentation and customs clearance in advance to minimise border delays.
- Executed secure end-to-end transport with lifting equipment, barge shipment, and direct site delivery.

## Outcome

The winch set was delivered safely and operational within 36 hours of arrival in Singapore, enabling the client to meet their project timeline without disruption.

# Case study: Infrastructure project warehousing and logistics solution

## Challenge

A Tier 1 contractor delivering a UK data centre project required a secure, scalable facility to store and manage high-value equipment. The operation needed to support large inbound deliveries, safe handling of oversized items, and long-term asset protection.

Key challenges included optimising storage space, selecting appropriate handling equipment, establishing structured transport planning, meeting compliance standards, and mitigating security and pest-related risks.

## Action

- Developed an optimised, scalable storage plan aligned with phased deliveries.
- Standardised handling procedures and ensured specialist lifting equipment was available.
- Created a flexible cost structure based on storage demand.
- Conducted a structured consultancy process, including questionnaires, a Scope document, and Supplier Specification Sheet to shortlist suitable providers.
- Strengthened risk-mitigation, access planning, and transport scheduling.
- Recommended GPS tracking for high-value items and explored sustainability measures.

## Result

The project delivered a highly efficient, compliant logistics hub with:

- Improved space utilisation and streamlined handling.
- Reduced transport inefficiencies through structured planning.
- Enhanced security and long-term risk protection.
- Scalable capacity to support growing project needs.
- More sustainable and cost-effective operations.

## Additional Value

The project delivered a highly efficient, compliant logistics hub with:

- Improved space utilisation and streamlined handling.
- Reduced transport inefficiencies through structured planning.
- Enhanced security and long-term risk protection.
- Scalable capacity to support growing project needs.
- More sustainable and cost-effective operations.

# Just a few more of **WTA Energy's** many success stories...

## Seamless delivery of BESS components from China to EU

WTA managed the end-to-end delivery of time-sensitive BESS components from China to The Netherlands for a battery storage project. The cargo included lithium-ion batteries requiring dangerous goods handling and complex multimodal temperature controlled transport.

Through detailed pre-shipment planning, customs consultancy, and on-site delivery coordination, the project was kept on schedule. This gave the client a smooth, compliant route to site delivery with no delays or regulatory setbacks.

## Streamlined global logistics for marine spares

WTA delivered a tailored logistics solution for a major UK vessel operator needing consistent, compliant delivery of marine spare parts from global suppliers for their fleet.

The client faced fragmented supply chains, customs delays, and lack of visibility, which all increased risk of vessel downtime.

So, we introduced structured workflows across freight, customs, and documentation, matched routing to urgency, and set up our real-time tracking system for their procurement and engineering teams.

By consolidating loads and standardising supplier processes, we reduced freight costs and lead times. The result was a smoother, faster, and more transparent supply chain that kept vessels operational and engineering teams better informed.
